Table Of Content

Table Of Content	2
Introduction	2
Sequence Diagrams:	3
Adjusting the speed of the simulation	3
Adding duration to the simulation	3
Calculating maximum flow of cars on the road network	4
Calculating current flow of cars	6
Enable Surprise Elements	7
Start the simulation: Sub-diagram	8
Add Emergency Vehicle	9
Disable Emergency Vehicle	9
Adjusting Pedestrians	11
Enabling Road Sensors	11
Disabling Road Sensors	12
UML Class Diagram	13

Introduction

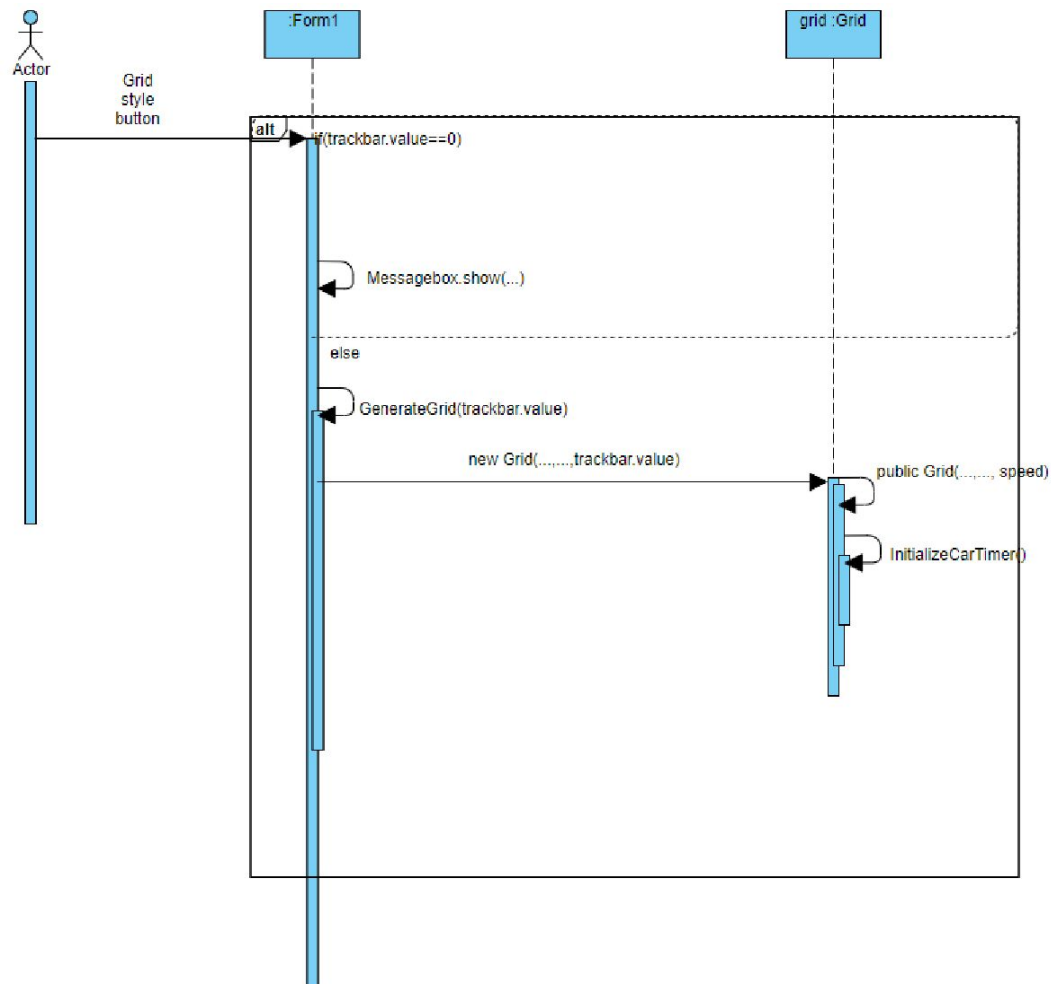

This document contains all the sequence diagrams from iteration 2 and the most up-to-date UML class diagram.

The UML class diagram contains all the classes in our application and their relationships.

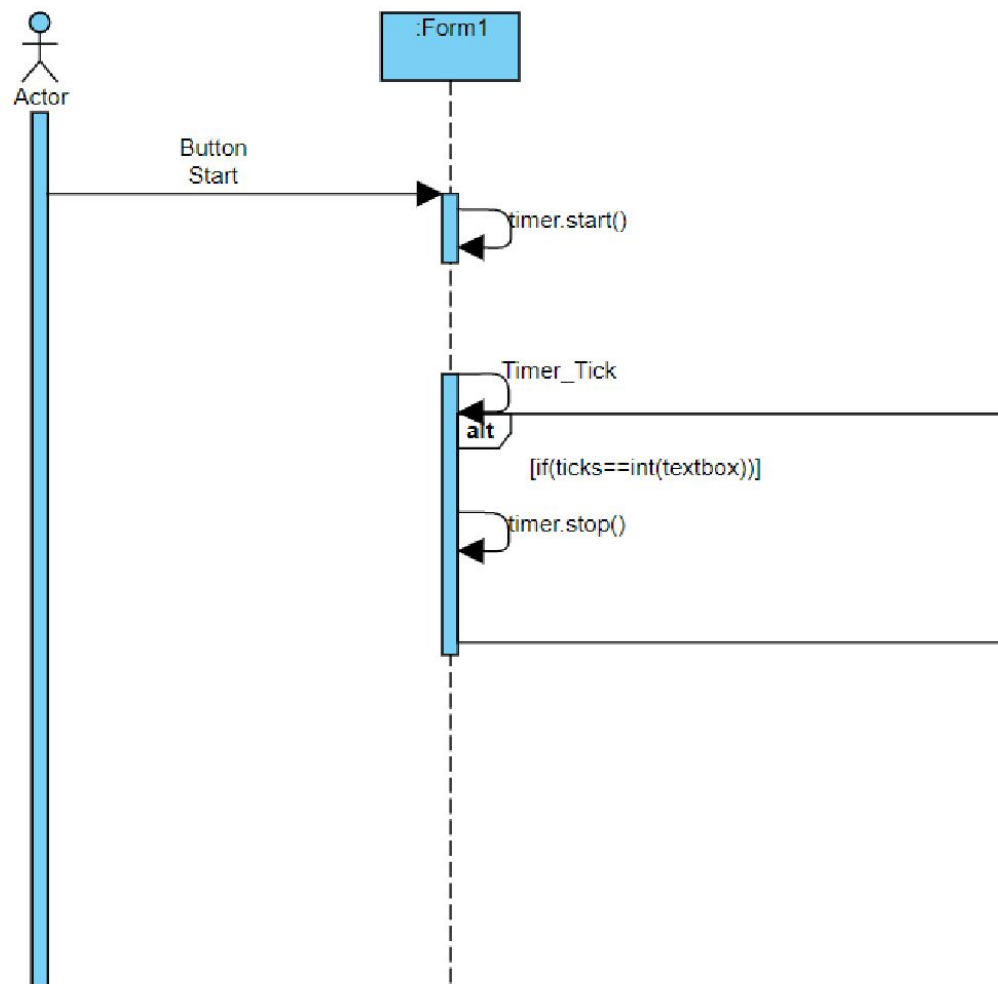

The sequence diagrams are based on the use cases we included in the “User Requirements Specifications” document, the details on these diagrams are found in that document.

Sequence Diagrams:

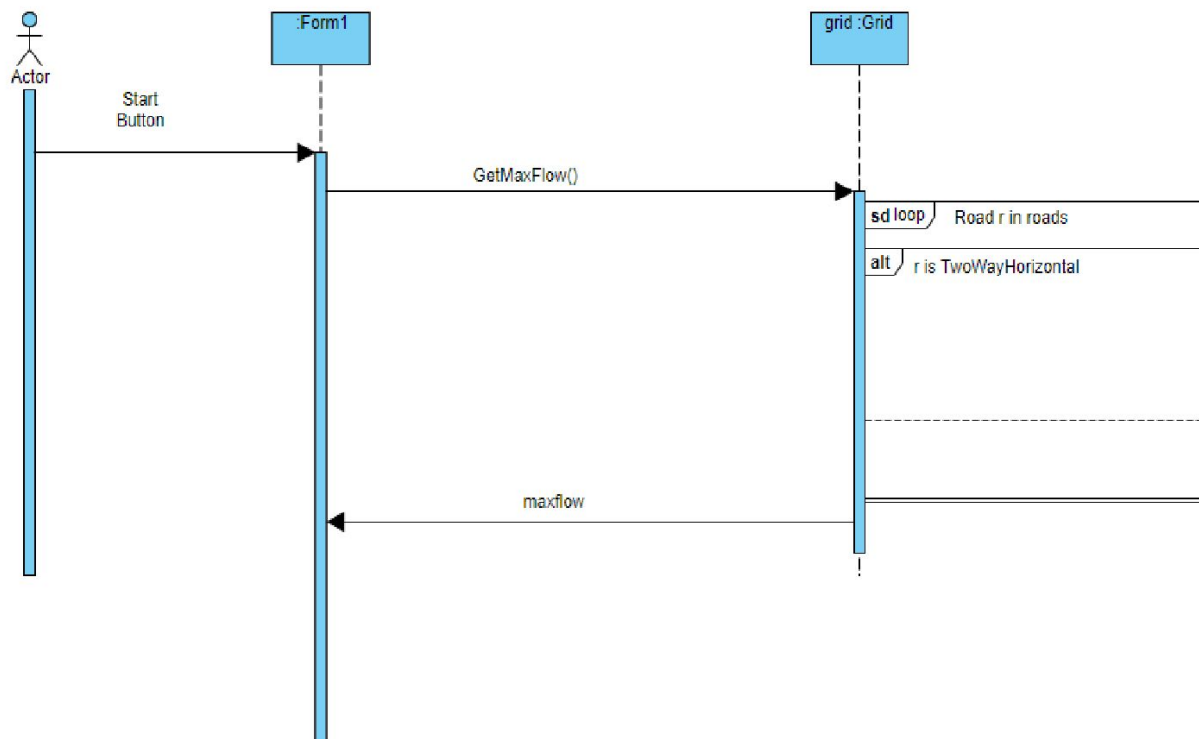

Adjusting the speed of the simulation

Adding duration to the simulation

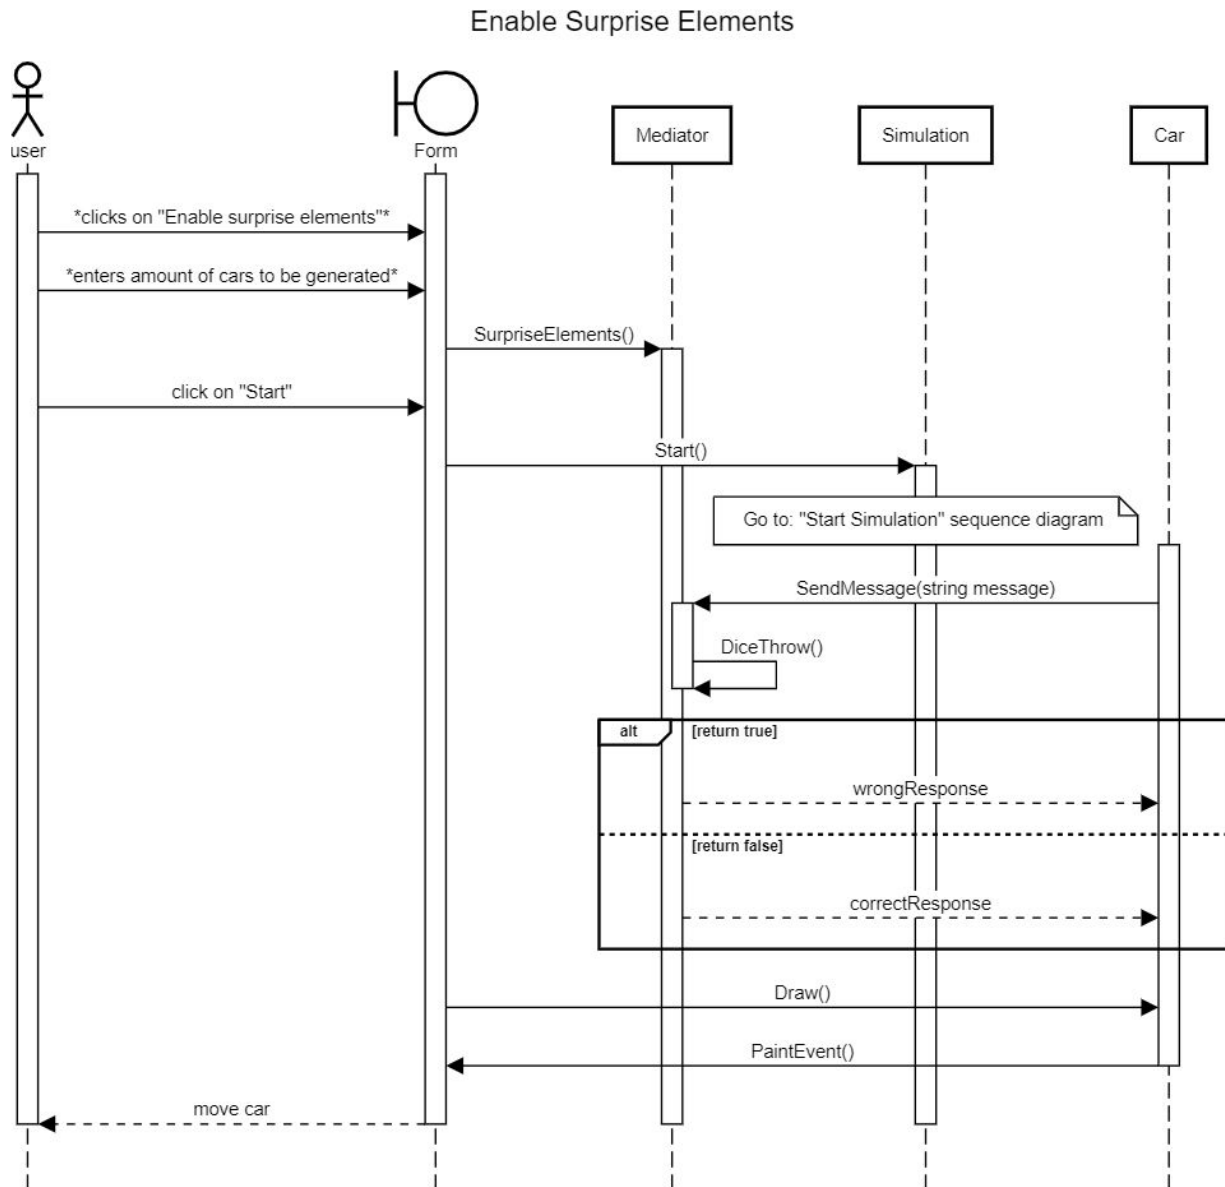

Calculating maximum flow of cars on the road network

Calculating current flow of cars

Enable Surprise Elements

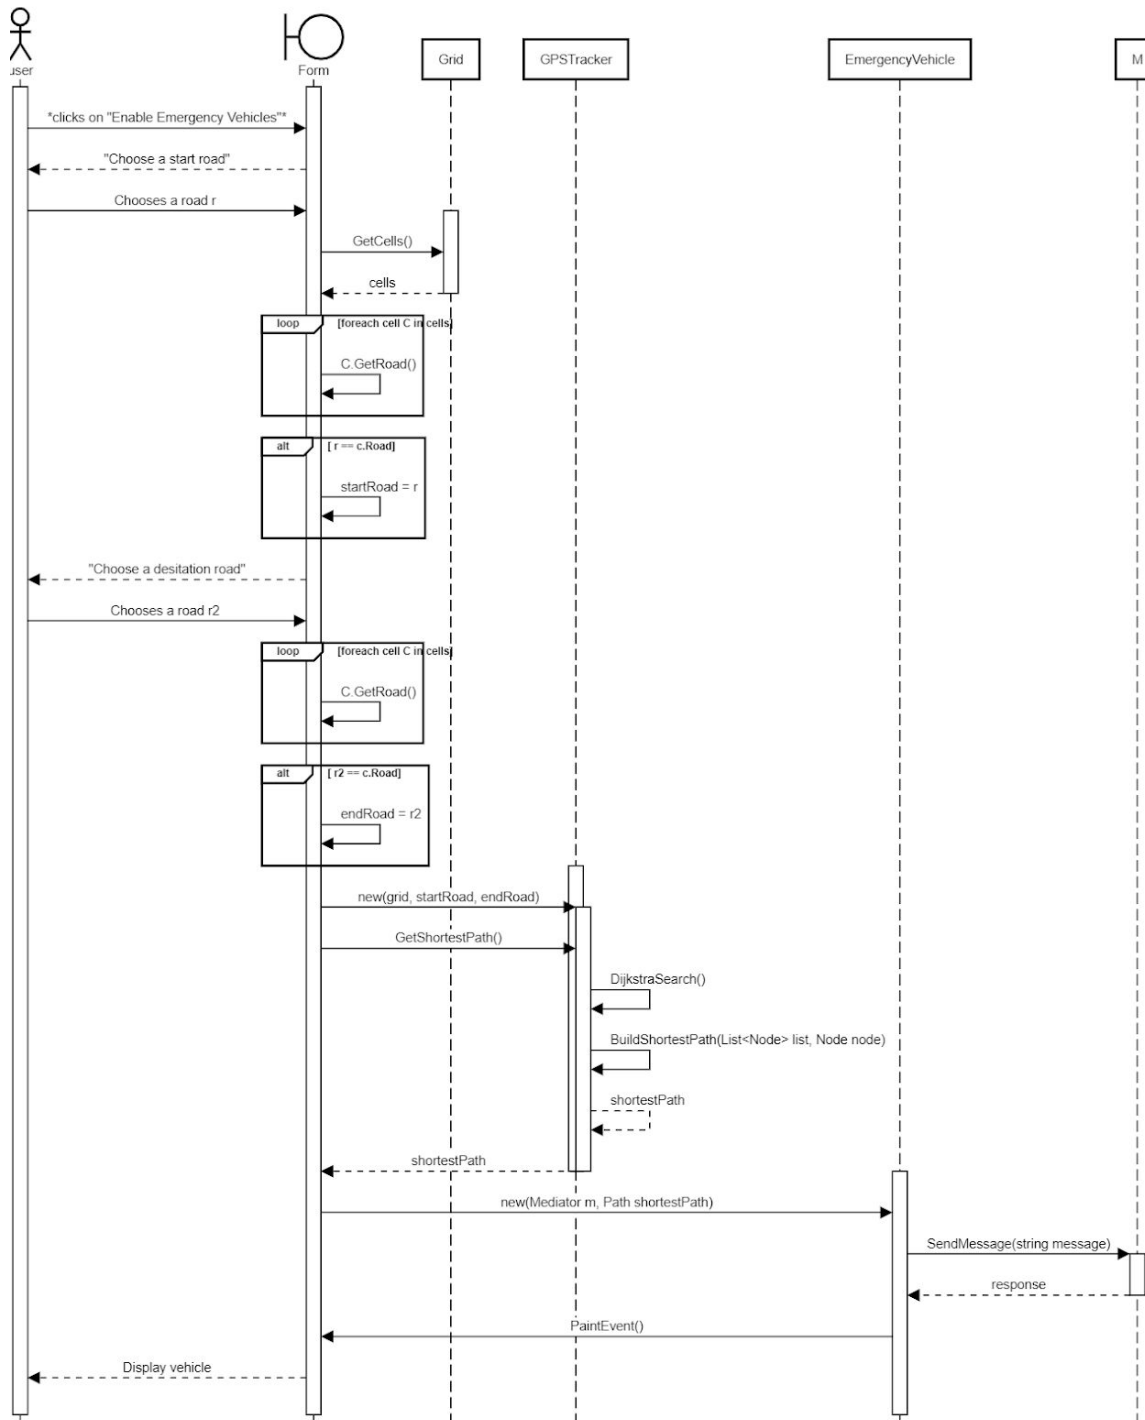

Start the simulation: Sub-diagram

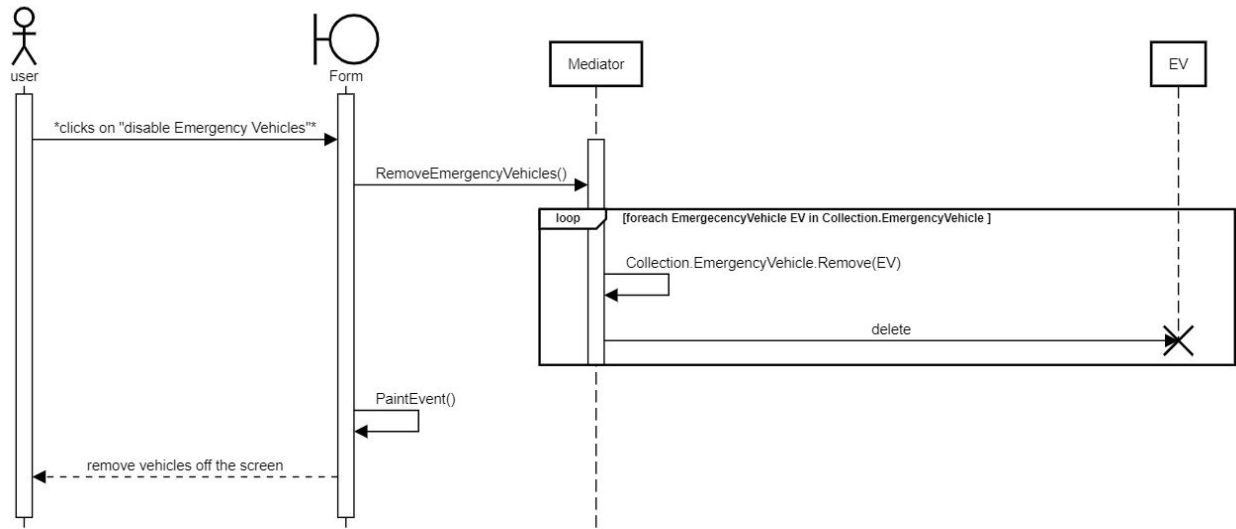

Add Emergency Vehicle

Add Emergency Vehicles

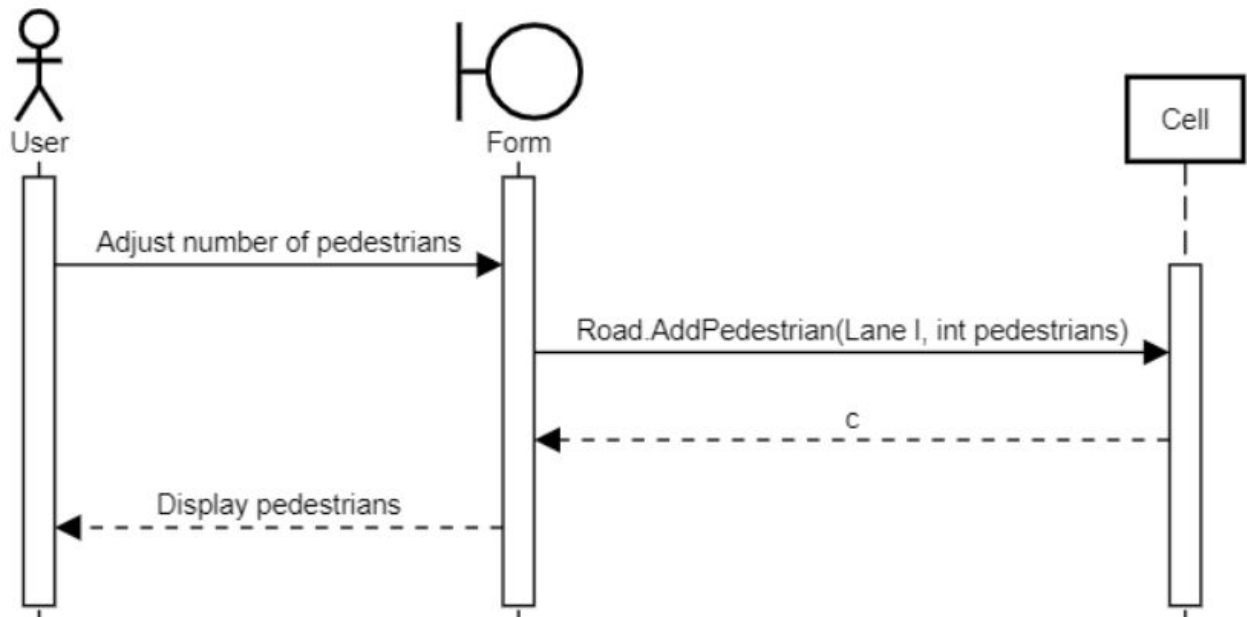

Disable Emergency Vehicle

Remove Emergency Vehicles

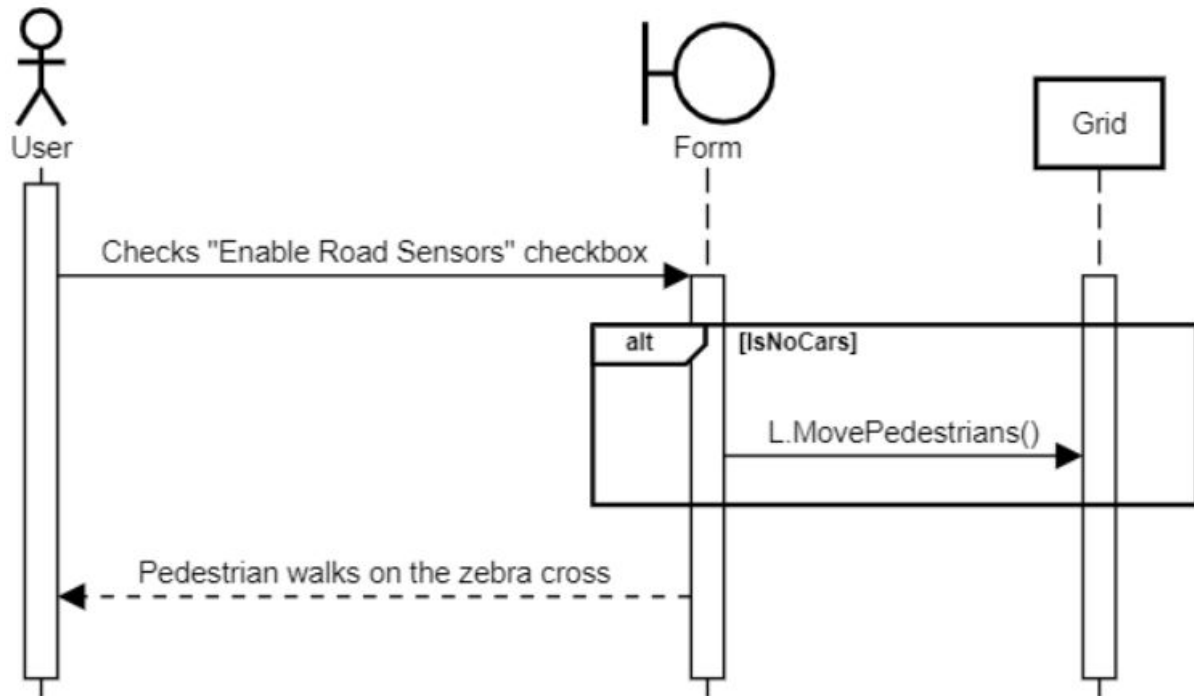

Adjusting Pedestrians

Adjusting Number of Pedestrians

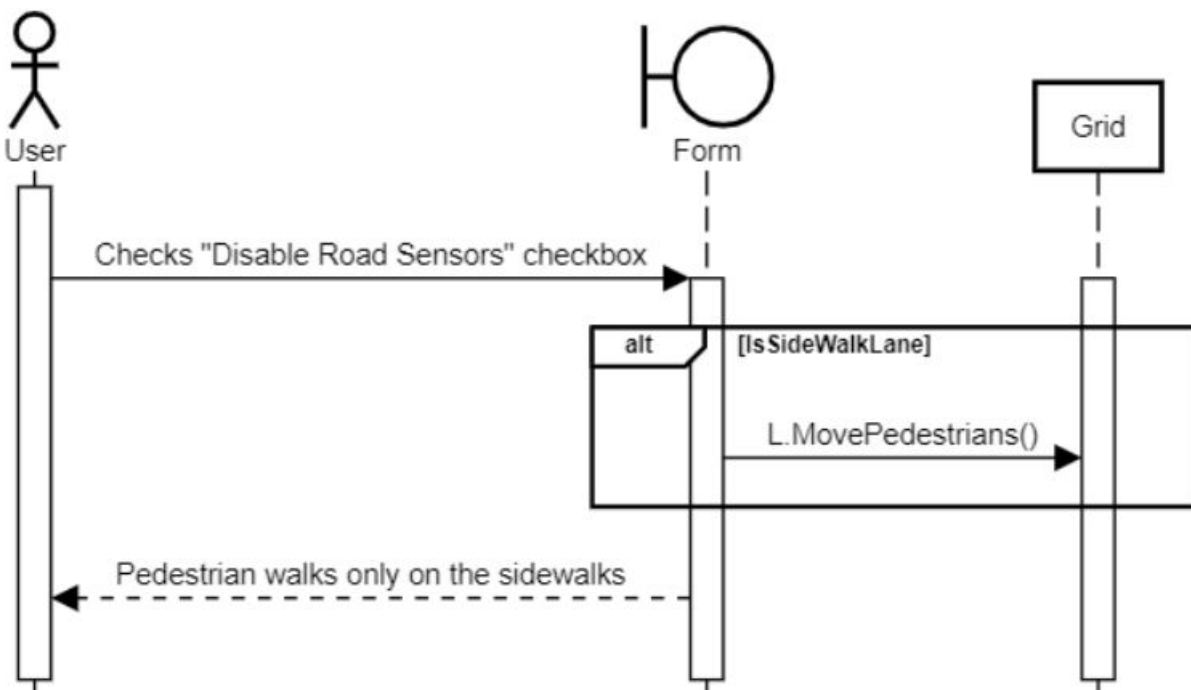

Enabling Road Sensors

Enable Road Sensors

Disabling Road Sensors

Disable Road Sensors

UML Class Diagram
