

Meeting Minutes

Date: March 4h, 2020

Time: 9:30 – 10:30

Location: R1_3.98

Week 2

B

- Grading is going to be done at the end of the project for each document!

Topic 2: URS Document

- Add non-functional requirements to the document
- Add use case diagrams for all features from Moscow List (use different colours for each type, green for must, yellow for should, etc)
- Draw sketches for how the UI is going to look like, then go to each use case and reference the buttons
- For the “Stop Simulation” use case, add “user closes the program” to the “user restarts the program” extension
- Add post-condition to “Stop Simulation” use case which says that the simulation is reset
- Remove the “Application is running” pre-condition, and add “Simulation is stopped” for each use case
- Make the actor “user” in all use cases
- Avoid showing error messages (you can put error sounds instead)
- The use case with id 12 needs to be more specific, specify that some use cases will be reviewed later on

Topic 3: Plan for iteration 1

- It needs to include a small part of our Gantt Chart, talk in more detail about what we are going to do, break it down
- It needs to be around 1 page
- Include the Scrum Diagram notions (Planning, Implementation, Review, Retrospect)
- It is important for iteration 2 document (because we can see what went wrong and what went well)
- We can put Work Division as appendix in the plan

Topic 4: Work Division Report

- Decide who does what, which functionality is done by which student, keep it general
