

Meeting Minutes

Date: March 10h, 2020

Time: 9:30 – 10:00

Location: R1_3.98

Week 3

Topic 1

- Non-functional requirements
 - We need to be more specific and add details to each requirement
- Use Case Diagram
 - There are duplicates (Generate Report) in the Must and Should sections. Be more specific about what kind of information on the report is a must and should.
 - Move Display Tips to Could
- UI Sketches
 - Remove the tips wireframe. Do the tips in a way that a user can drag the mouse on things and see information, pop ups. Keep it simple.
 - Report Simulation Window: We can add a feature to compare reports (Should). For example, by specifying cars per minute using the same map we can generate results and compare them. We can have a feature to export the results as pdf (Could). We can put a time constraint for the simulation.

Topic 2 – Iteration Plan 1

- Specify in the beginning what we've done so far (project plan, URS, etc)
- In iteration plan 2, we need to specify if something went wrong while implementing the features in Iteration Plan 1

Topic 3

- Windows forms or WPF?
 - Choose windows forms (stick to what you know)
- Is the work division report done per iteration or for the whole project?
 - Show who did what per iteration and the time spent for activities
- Should the user be able to change singular traffic sign's greenlight timing? Or should they be able to change the timing for the whole simulation?
 - A user should be able to change the green/red timing per traffic light, or pairs
